

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of subscription to a service in respect of a processing of an input program comprising at least one particular event, said method comprising the steps of, implemented by a service provider:

5 |       generating an information signal containing control  
| information and an input program comprising at least one particular  
| event, and control information;

          transmitting said information signal to each user;

10 |       offering various subscriptions to a user who is to make a  
| choice of subscription and who is furnished with a device  
| comprising means of selection of the particular event which can be  
| configured on the basis of the chosen subscription ~~and are suitable~~  
| ~~for providing, said means of selection operating on the input~~  
15 | ~~provide~~ an output program comprising or not comprising the  
| particular event according to the chosen subscription in dependence  
| on said control information; and

          validating the user's choice of subscription which  
triggers a step of configuring said means of selection.

2. (Previously Presented) The method of subscription to a service as claimed in claim 1, wherein the control information includes a table of events, the means of selection being suitable for

selecting a particular event on the basis of an event status value  
5 in the table.

3. (Previously Presented) The method of subscription to a service as claimed in claim 1, wherein said device comprises means of accelerated reading of a recorded program; and means of deactivation for deactivating said accelerated reading means during  
5 the particular event in respect of a specified subscription in dependence on said control information.

4. (Original) The method of subscription to a service as claimed in claim 1, wherein the particular event contains at least one advertisement.

5. (Original) The method of subscription to a service as claimed in claim 1, wherein the choice of the subscription is made by selecting one subscription from among several subscriptions offered on a graphics interface linked to said device.

6. (Original) The method of subscription to a service as claimed in claim 1, wherein said validating step is implemented by the service provider by sending said device a signal characteristic of the chosen subscription, said signal being suitable for  
5 configuring said means of selection as a function of the chosen subscription.

7. (Currently Amended) A device for receiving an information  
signal including control information and an input program having at  
least one particular event, ~~and control information~~, said device  
comprising means of selection of the particular event configurable  
5 by a provider of the information signal on the basis of a  
subscription chosen by a user, said selection means, operating on  
said input program having at least one particular event, to  
selectively provide ~~providing~~ an output program comprising or not  
comprising the particular event according to the subscription  
10 chosen by the user in dependence on the control information.

8. (Currently Amended) A device for receiving an information  
signal including control information and an input program having at  
least one particular event, ~~and control information~~, said device  
comprising means of selection of the particular event configurable  
5 by a provider of the information signal on the basis of a  
subscription chosen by a user, said selection means operating on  
said input program having at least one particular event in order to  
store ~~storing~~ on a medium an output program comprising or not  
comprising the particular event according to the subscription  
10 chosen by the user in dependence on the control information.
